Low-fidelity wireframes

1. Purpose

This document contains text-based, low-fidelity wireframes for the shared platform and the two product experiences. These are layout proposals, not implemented UI.

2. Shared platform wireframes

2.1 Sign-up and onboarding

```
+------------------------------------------------------------+

```

3.3 Business intelligence detail

```
+---------------------------------------------------------------------+
| Business intelligence                  [Ask a question] [Run analysis] |
+---------------------------------------------------------------------+
| Question: Why is profitability down this month?                     |
|                                                                     |
| Summary                                                             |
| Profitability fell 11% because shipping and payroll costs rose above plan.|
|                                                                     |
| Evidence                                                            |
| - Shipping spend increased 18% over prior month                     |
| - Staff costs increased by 7%                                       |
| - Revenue remained flat for the same period                         |
|                                                                     |
```

```
| Issues                                                                  |
| 1. Shipping costs above target                                           |
| 2. Payroll variance in the current period                                |
|                                                                         |
| Opportunities                                                            |
| - renegotiate freight terms, compare suppliers                           |
| - review staffing schedule and utilisation                               |
|                                                                         |
| Recommended action                                                       |

4.5 Remediation and report

```
+-----------------------------------------------------------------------+
| Remediation and report                      [Request retest] [Export] |
+-----------------------------------------------------------------------+
| Finding: Authorization bypass                                         |
| Remediation status: In progress | Validation: pending                 |
|                                                                       |
| Guidance                                                              |
| - Enforce signed access check against session scoping                 |
| - Validate rbac scope on each privileged endpoint                     |
| - Add regression tests for access enforcement                         |
|                                                                       |
| Retest status                                                         |
| Not yet requested                                                       |
|                                                                       |
```

```
| Final report status                                                    |
| Draft report ready for approval                                         |
+-------------------------------------------------------------------------+
```

5. Notes on wireframe intent

- These wireframes emphasise usability, not final styling.
- Data-heavy screens should prioritize action, status, and evidence before decorative elements.
- The wireframes deliberately maintain product distinctions and avoid presenting any security testing as unrestricted.
